

SAFETY

At Team Elmer’s, we are defined by our commitment to health and safety. This safety culture starts with pre-employment screening and safety training before putting an employee to work in the field.

In addition to a vigilant workforce, we have a full-time health and safety manager who conducts documented weekly job site and plant visits and takes corrective action if necessary.

Certifications

Team Elmer’s employees hold many certifications to insure that each job is done in the safest manner possible. Some of the certifications held within our company include:

- 10-hour OSHA certification for all dirt employees
- 40-hour HAZWOPER
- 40-hour Mobile Crane
- 40-hour NESHAP (National Emissions Standards for Hazardous Air Pollutants)
- Air Mask Fit Test
- Asbestos Awareness
- Competent Persons Training - Soils and Shoring
- Confined Space
- CPR and First Aid
- H2S Awareness (Hydrogen Sulfide)
- HDPE Butt Fusion and Electro Fusion Welding
- Lead Safety for RPP
- MSHA (Mine Safety and Health) operator
- SCBA & Supplied Air
- Supervisor Training
- Heavy truck drivers receive Defensive Driving certifications from the National Safety Council

Ongoing Safety Training

Below is a sampling of the development activities we offer to our workers and project managers:

- Required spring safety training for all crew members
- Weekly safety tailgate talks
- Access to several organizations that share our safety practices
- “Caught Being Safe” internal employee reward program
- New trench box technology for zero setback digging
- Truck driver training with State Police DOT Officers

Team Elmer’s has clearly defined standards to better identify, assess, and manage risks. These practices include:

- On-Staff Safety Specialist
- Surprise and Scheduled Inspections
- “Reduction in Reportable Incidents” Goal
- “Reduction in Preventable Accidents” Goal

OUR SERVICES INCLUDE:

- | | | | |
|--------------------------------|-----------------------------------|---------------------------------|---------------------------------------------|
| Aggregates | Foundation Repair | Micro Piles | Rock Drilling |
| Asphalt Paving | Foundations | Milling | Sheet Piling |
| Auger Cast Piles | Geosynthetics Installation | Pipe & Drainage | Site Development |
| Bore & Jack | GlowStones | Pipe Bursting | Soil Remediation |
| Concrete Construction Supplies | Heavy Haul | Pipe Fusing | Snow Removal |
| Concrete Masonry Blocks | Helical Piers and Tiebacks | Precast Blocks | Soil Retention |
| Concrete Pump Truck | Lagoon Construction | Precast Septic Tanks | Trucking-for-Hire |
| Concrete Ready Mix | Land Clearing | Pulverizing | Underground Sewer/Water Installation |
| Crane Services | Landfill Construction | Push Piers | Underground Utilities/Gas Line Installation |
| Custom Manhole Precast | Landfill Gas Collection System | Railroad Side Car Loading Docks | VAC Truck |
| Demolition | Laser Screed | Restoration Service | Waste Water Treatment Facility Construction |
| Dewatering | Machinery Moving | Retaining Wall Blocks | Wood Chipping |
| Directional Drilling | Manhole Rehabilitation (Sprayroq) | Retaining Wall Installation | Wood Piling |
| Earth Moving/Earthwork | | Rigging | |

Concrete Ready-Mix
Custom Crushing
Specialty Concrete Services

Concrete Ready-Mix

Team Elmer's provides Ready-Mix for a wide variety of applications. No job is too large or too small. We work regularly with contractors and architects on major building projects as well as provide concrete for your backyard patios and other home projects.

Our state-certified testing technicians ensure the quality of your concrete mix. State-certified stone from our aggregate pits ensures quality and control to every project we pour!

- Our five and six-axle front discharge mixers hold up to 11 cubic yards
- Team Elmer's offers a full line of finishing tools, colored concrete, reinforcing products, allied products (anchor bolts and lug nuts, pipe), masonry, and aggregates
- Precast blocks, concrete masonry blocks, retaining wall blocks and other concrete construction supplies are available

Pump Truck

Take on more projects for more profit by utilizing concrete pumps. Our team of highly trained pump operators and certified boom inspectors have decades of professional and trouble-free concrete pumping experience.

The advantages of concrete pumping:

- Faster placement of concrete over conventional methods (up to 1-1/2 yards per minute)
- Can reduce manpower needed for placement on larger flat work jobs
- Can reduce or avoid pour lines and cold joints
- Not necessary to add as much water which helps to avoid loss of strength
- Helps to reduce the amount of site traffic, reducing the amount of mud and debris tracked into the road

Trailer Pump

Trailer pumps helps put concrete in places you think you can't reach. Our trailer pump boom has a hard line hose and flexible hose options to meet most job requirements. Team Elmer's has many sizes which pump up to 50 yards per hour.

Laser Screed

Our Laser Screed machine allows for substantial labor savings, fast-track production through wide placement methods, and stronger, higher quality floors. Perfect for pole buildings, barn floors and other large service areas.

Pervious Concrete

Pervious concrete lets the "river run through it," so to speak, so that rainwater returns to and replenishes groundwater, instead of creating puddles and stormwater runoff, an environmental liability.

It's a win-win-win: the property owner can make better use of acreage by avoiding the need for expensive and expansive retention ponds; their users and customers appreciate that puddles and mud disappears, leaving a clean, level surface; and, the environment wins because stormwater runoff is dramatically reduced.

Custom Crushing

Crushing operations can be mobilized to any site, letting your on-site material work for you. With several different styles of crushers, no job is too difficult. We'll pull the permits for you! State specified material testing is available if needed.

- Dimensional aggregate processing
- Road gravel processing
- Material screening
- Material crushing
- Concrete and asphalt crushing
- Quarry sand and gravel processing
- And more

Recycled Concrete

Concrete crushing allows you to recycle what used to be considered landfill material. Team Elmer's crushing capabilities allow you to crush up to 3 ft. by 3 ft. concrete debris into a usable product for parking lots or road foundations. With three magnets in the operation, steel is removed and recycled to eliminate contamination. We are the proud recipient of the Michigan Recycling Coalition's 2009 Recycler of the Year Award.

Portable Cemco Four Bin Concrete Batch Plant

The Team Elmer's portable concrete batch plant allows us to increase production and decrease costs. This plant has many highlights:

- Completely self-erecting; eliminating the need for cranes, a substantial savings in set-up costs and time.
- Totally self-sufficient and needs no outside power source.
- Compact footprint minimizing job site space requirements.
- Can be erected and operational within one day.
- Able to produce over 150 cubic yards per hour.
- With the plant closer to the job site fewer mixers are needed, saving fuel, labor and equipment costs.

GlowStones

Have you ever wanted your driveway to glow? Do you want parts of your house or yard to look like an eerily illuminated set piece from famous sci-fi or fantasy films? Team Elmer's, a Master Dealer for GlowStone technology, is ready to make that possible.

The product, which includes GlowStones, GlowSand, and GlowCrete, is a breakthrough, futuristic technology of resin manufactured stone that, after 15 minutes of exposure to sunlight, will actually glow for up to 12 hours! This glow technology has a lifespan of up to 20 years, so your designs can stay sleek and eye-catching long after installation.
