E-Z SEAL INTEGRAL WATER REPELLENT

E-Z Seal Integral Water Repellent is a sealing admixture added into the concrete ready-mix at the batch plant. E-Z Seal replaces the need to apply sealant after the concrete is placed. E-Z Seal Integral Water Repellent is a uniform consistency throughout the concrete mix that assists with the finishing process. It is an odorless material that removes the ventilation concern when sealing interior floors, highly populated areas, and interior winter sealing projects.

Eliminate the cost of applying a sealant after finishing; save on a second mobilization or wait time, reduce labor, clean up, and remove sprayers from the job site.

Eliminate the cost of applying a sealant after finishing; save on a second mobilization or wait time, reduce labor, clean up, and remove sprayers from the job site.

An Integral Sealer reduces maintenance and improves water repellency.

BENEFITS

- Improved Water Repellency
- Reduced Efflorescence
- Increased Durability
- Improved Aesthetics (Brighter colors in colored concrete)
- Improved Production Rates
- Reduce Time/Mobilizations or Waiting
No return trips to hand seal with surface only products
- Reduces Rapid Evaporation
- Improves consistency in cure rate
- Immediate Protection From Oil and Winter Salts
- Protect the Longevity of Your Investment
- Sealer is throughout the entire depth of Concrete
- Exclusive Product to Team Elmer's In Northern Michigan

APPLICATIONS:

- Garage Exteriors
- Sidewalks
- Driveways
- Poured Walls
- Hot Weather Installations
- And More
